What is BOTOX® ?

Also called: Botulinum toxin type A. Botox is a drug made from a toxin produced by the bacterium Clostridium botulinum. Botox injections work by weakening or relaxing certain muscles or by blocking certain nerves. The effects last from 3-12 months depending on what you are treating.

ENHANCE YOUR SKIN & SELF CONFIDENCE:

- Softer, smoother skin
- Wide-eyed expression
- Refreshed look
- Smiles without "Crow's Feet"
- Relaxed frown and worry lines
- Safe, quick treatment
- Simple Procedure
- Proven results
- No recovery time

BOTOX

Fast

The average treatment time is 10-15 minutes. Many people get it on lunch break and then go back to work. Millstone Medical is conveniently located to provide the opportunity to stop by during the work day for treatment.

Safe

With over 4 million Botox treatments per year in the United States, Botox has an extremely low incidence of complications. While complications with Cosmetic Botox are possible, they are extremely rare.

Effective

Botox gives reliable results that are significant but subtle when treatment is performed by an experienced medical professional. The most common Botox review is that "it looks so natural!"

What results can I expect?

Normally, you will notice effects of treatment within a few days. You'll see visible improvement after two weeks. By then, your muscles will be dormant, and as your skin softens, your wrinkles and lines become less visible. Your face will have a firmer, more youthful, pleasing appearance.

Imagine a more beautiful you!!!!

Botox injections are but one of many treatments we offer to revitalize your appearance. Please ask us about other anti-aging procedures to refresh and renew your natural beauty.
